Introduction

This document describes the Gfifax Application Developer Interface for faxws outbound web services.

Overview

Developers can use GFI FaxMaker Online's fax services by developing applications to interact with our fax outbound web services. Developers can now choose from a wide variety of platforms to develop their applications.

Our web services are secure since they require transport layer encryption (HTTPS). Note that HTTPS is required.

Getting Started

Before you start developing applications using the GFI FaxMaker Online Developer Outbound Web Services API you will need the following -

Internet Access

GFI FaxMaker Online outbound web services require HTTPS access through port 443.

The URL for the web service WSDL is - <https://ws.gifax.com/fax/v5/faxws.wsdl>

Development Tools

A development environment that supports web services is required.

GFI FaxMaker Online Account

An account (with outbound services capability) from GFI is required to use the outbound web services.

API Reference

Phone Number Dialing Rules

- Fax numbers can be in one of these formats
 - **North American Numbers** - In this format the fax number is prefixed with the long distance access code '1' (Country code). After '1' the fax number consists of an area code (3 digits) and local number (7 digits). A leading '1' is mandatory for North American numbers.
 - **International recipient in US dial-able format** - In this format, '011' is added in front of the international number. For example 01133112345678 would be considered as country code 33, followed by the area code and fax number. You can also specify International numbers without '011'. As an example 33112345678 would be considered as country code 33, followed by the area code and fax number.

** Any non-numeric digits will be filtered out by the gateway from any fax numbers (+,(.) etc...);

Supported Document Types

Description	Extension	FileTypeid
TIFF (G3)	.tif	1
TIFF (G4)	.tif	2
TIFF merge cover files	.tif	4
Word Document	.doc,.docx	100
PDF Document	.pdf	101
RTF Document	.rtf	102
Excel Document	.xls .xlsx	103
PowerPoint Document	.ppt .pptx	104
Text file	.txt	105
Visio Document	.vsd .vsdx	106
GIF Image	.gif	107
JPEG Image	.jpg .jpeg	108
Color TIFF	.tif	109
HTML	.htm .html	111
MHTML	.mht .mhtml	112

Interface Methods

This section describes the available interface methods.

1.0 CancelFax

Description

This function can be used to submit a cancel request for a previously submitted job using the job ID string.

Syntax

```
bool CancelFax(string UserID, string strPIN, string JobId, out WSSError WSSError)
```

	Parameters	Type	Definition
Input	<i>UserID</i>	string	(Required) String representing the GFI FaxMaker Online assigned Username. Example: mbx12065551212
	<i>strPIN</i>	string	(Required) String representing the password
	<i>JobId</i>	string	(Required) String representing the fax number
Output	<i>WSSError</i>	WSSError	Return Error details. See Appendix A for more details about WSSError definition
Result	<i>Return</i>	bool	True/False indicating result of method call

Remarks

- See next page for Soap Request/Response examples

CancelFax Soap 1.1 Request

```
<?xml version="1.0" encoding="utf-8"?>
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/" 
    xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
    xmlns:xsd="http://www.w3.org/2001/XMLSchema">
<soap:Body>
<CancelFax xmlns="urn:FaxWS">
<UserID>string</UserID>
<strPIN>string</strPIN>
<JobId>string</JobId>
</CancelFax>
</soap:Body>
</soap:Envelope>
```

CancelFax Soap 1.1 Response - CancelFaxResponse

```
<?xml version="1.0" encoding="UTF-8"?>
<SOAP-ENV:Envelope xmlns:SOAP-ENV="http://schemas.xmlsoap.org/soap/envelope/" 
    xmlns:SOAP-ENC="http://schemas.xmlsoap.org/soap/encoding/"
    xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
    xmlns:xsd="http://www.w3.org/2001/XMLSchema"
    xmlns:FaxWS="urn:FaxWS">
<SOAP-ENV:Body>
<FaxWS:CancelFaxResponse>
<FaxWS:return>boolean</FaxWS:return>
<FaxWS:WSError>
<FaxWS:ErrorCode>int</FaxWS:ErrorCode>
<FaxWS:ErrorString>string</FaxWS:ErrorString>
</FaxWS:WSError>
</FaxWS:CancelFaxResponse>
</SOAP-ENV:Body>
</SOAP-ENV:Envelope>
```

2.0 CheckService

Description

This method can be used to check the connectivity with GFI FaxMaker Online Web Services

Syntax

string CheckService()

	Parameters	Type	Definition
Input			
Result	<i>Return</i>	string	Returns “Server Is Up” if connect successful and service is ready to take requests.

CheckService Soap 1.1 Request

```
<?xml version="1.0" encoding="utf-8"?>
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xmlns:xsd="http://www.w3.org/2001/XMLSchema">

<soap:Body>
  <CheckService xmlns="urn:FaxWS" />
</soap:Body>
</soap:Envelope>
```

CheckService Soap 1.1 Response

```
<?xml version="1.0" encoding="UTF-8"?>
<SOAP-ENV:Envelope xmlns:SOAP-ENV="http://schemas.xmlsoap.org/soap/envelope/
  xmlns:SOAP-ENC="http://schemas.xmlsoap.org/soap/encoding/
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xmlns:xsd="http://www.w3.org/2001/XMLSchema"
  xmlns:FaxWS="urn:FaxWS">

<SOAP-ENV:Body>
  <FaxWS:CheckServiceResponse>
    <FaxWS:return>string</FaxWS:return>
  </FaxWS:CheckServiceResponse>
</SOAP-ENV:Body>
</SOAP-ENV:Envelope>
```

3.0 GetFaxBroadcastReport

Description

This function can be used to submit a report request for a previously submitted fax broadcast job using the job ID string. The out parameter contains error information (if the job submission failed). This function requires a fax broadcast account.

Syntax

```
bool GetFaxBroadcastReport(string UserID, string strPIN, string JobId, int RecipientType, string RecipAddress, out WSSError WSError)
```

	Parameters	Type	Definition
Input	UserID	string	(Required) String representing the GFI assigned Username. Example: mbx12065551212
	strPIN	string	(Required) String representing the password
	JobId	string	Return account information. See Appendix A for more details about GfifaxAccount definition
	RecipientType	Int	Report recipient type: 0=email, 1=fax
Output	WSSError	WSSError	Return Error details. See Appendix A for more details about WSSError definition
Result	Return	bool	True/False indicating result of method call

Remarks

- See next page for Soap Request/Response examples

GetFaxBroadcastReport Soap 1.1 Request

```
<?xml version="1.0" encoding="utf-8"?>
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/" 
    xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
    xmlns:xsd="http://www.w3.org/2001/XMLSchema">
<soap:Body>
<GetFaxBroadcastReport xmlns="urn:FaxWS">
<UserID>string</UserID>
<strPIN>string</strPIN>
<JobId>string</JobId>
<RecipientType>int</RecipientType>
<RecipAddress>string</RecipAddress>
</GetFaxBroadcastReport>
</soap:Body>
</soap:Envelope>
```

GetFaxBroadcastReport Soap 1.1 Response

```
<?xml version="1.0" encoding="UTF-8"?>
<SOAP-ENV:Envelope xmlns:SOAP-ENV="http://schemas.xmlsoap.org/soap/envelope/" 
    xmlns:SOAP-ENC="http://schemas.xmlsoap.org/soap/encoding/"
    xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
    xmlns:xsd="http://www.w3.org/2001/XMLSchema"
    xmlns:FaxWS="urn:FaxWS">
<SOAP-ENV:Body>
<FaxWS:GetFaxBroadcastReportResponse>
<FaxWS:return>boolean</FaxWS:return>
<FaxWS:WSError>
<FaxWS:ErrorCode>int</FaxWS:ErrorCode>
<FaxWS:ErrorString>string</FaxWS:ErrorString>
</FaxWS:WSError>
</FaxWS:GetFaxBroadcastReportResponse>
</SOAP-ENV:Body>
</SOAP-ENV:Envelope>
```

4.0 GetFaxBroadcastStatus

Description

This function can be used to request status of a fax broadcast using the job ID string. The out parameter contains error information (if the job status failed). This function requires a fax broadcast account.

Syntax

```
bool GetFaxBroadcastStatus(string UserID, string strPIN, FaxBroadcastStatusRequest request, out  
RecipientStatusList StatusList, out WSError WSError)
```

	Parameters	Type	Definition
Input	UserID	string	<i>(Required) String representing the GFI FaxMaker Online assigned Username. Example: mbx12065551212</i>
	strPIN	string	<i>(Required) String representing the password</i>
	Request	FaxBroadcastStatusRequest	<i>(Required) See Appendix A for more details about FaxBroadcastStatusRequest definition</i>
Output	StatusList	RecipientStatusList	<i>Return a list of RecipientStatus. See Appendix A for more details about RecipientStatus definition</i>
	WSError	WSError	<i>Return Error details. See Appendix A for more details about WSError definition</i>
Result	Return	Bool	<i>True/False indicating result of method call</i>

Remarks

- See next page for Soap Request/Response examples

GetFaxBroadcastStatus Soap 1.1 Request

```
<?xml version="1.0" encoding="UTF-8"?>
<SOAP-ENV:Envelope
  xmlns:SOAP-ENV="http://schemas.xmlsoap.org/soap/envelope/"
  xmlns:SOAP-ENC="http://schemas.xmlsoap.org/soap/encoding/"

      </FaxWS:WSError>
    </FaxWS:FaxBroadcastStatusResponse>
  </SOAP-ENV:Body>
</SOAP-ENV:Envelope>
```

5.0 GetFaxCoverList

Description

This method can be used to retrieve a list of built-in cover pages Syntax

```
bool GetFaxCoverList(string UserID, string strPIN, out FaxCover[] FaxCoverList, int RecipientType, string RecipAddress, out WSError WSError)
```

	Parameters	Type	Definition
Input	UserID	string	(Required) String representing the GFI FaxMaker Online assigned Username. Example: mbx12065551212
	strPIN	string	(Required) String representing the password
Output	FaxCoverList	FaxCover[]	Return cover page list. See Appendix A for more details about WSError definition
	WSError	WSError	Return Error details. See Appendix A for more details about WSError definition
Result	Return	bool	True/False indicating result of method call

Remarks

- See next page for Soap Request/Response examples

GetFaxCoverList Soap 1.1 Request

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:urn="urn:FaxWS">

</SOAP-ENV:Body>
</SOAP-ENV:Envelope>
```

6.0 GetFaxStatus

Description

This function can be used to query the current status of multiple previously submitted fax jobs using the job ID string. The out parameters contain the fax status array (one per Job ID) and error information (if the job submission failed).

```
bool GetFaxStatus(string UserID, string strPIN, FaxJobId[] FaxJobIds, out FaxStatus[] FaxStatusList, out WSError WSError)
```

	Parameters	Type	Definition
Input	UserID	string	(Required) String representing the GFI FaxMaker Online assigned Username. Example: mbx12065551212
	strPIN	string	(Required) String representing the password
	FaxJobIds	FaxJobId[]	Array of job IDs to request status for. See Appendix A for more details about FaxJobId definition
Output	FaxStatusList	FaxStatus[]	Return array with results of each requested FaxJobId. See Appendix A for more details about FaxStatus definition.
	WSError	WSError	Return Error details. See Appendix A for more details about WSError definition
Result	Return	bool	True/False indicating result of method call

Remarks

- See next page for Soap Request/Response examples
- While requesting status for jobs, the user can either specify the GFI FaxMaker Online Job Id which is returned as part of job send responses (In ‘brxxxx’ format) or the customer specified Referenceld prefixed with ‘JRI-’ (‘JRI-Referenceld’). if the user is planning to use Referenceld as a way to identify a specific job, The user need to ensure the uniqueness of the Referenceld (Customer provided Identifier) while submitting the fax requests

GetFaxStatus Soap 1.1 Request

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:urn="urn:FaxWS">

</SOAP-ENV:Envelope>
```

7.0 GetRealTimeFaxStatus

Description

This function can be used to query the real time status (including pages sent) of multiple previously submitted fax jobs using the job ID string. The out parameters contain the real time fax status array (one per Job ID) and error information (if the job submission failed).

bool GetRealTimeFaxStatus(string UserID, string strPIN, FaxJobId[] FaxJobIds, out RealTimeFaxStatus[] FaxStatusList, out WSError WSSError)

	Parameters	Type	Definition
Input	<i>UserID</i>	string	(Required) String representing the GFI FaxMaker Online assigned Username. Example: mbx12065551212
	<i>strPIN</i>	string	(Required) String representing the password
	<i>FaxJobIds</i>	FaxJobId[]	Array of job IDs to request status for. See Appendix A for more details about FaxJobId definition
Output	<i>FaxStatusList</i>	RealTimeFaxStatus[]	Return array with results of each requested FaxJobId. See Appendix A for more details about RealTimeFaxStatus definition.
	<i>WSSError</i>	WSError	Return Error details. See Appendix A for more details about WSSError definition
Result	<i>Return</i>	bool	True/False indicating result of method call

Remarks

- See next page for Soap Request/Response examples
- While requesting status for jobs, the user can either specify the GFI FaxMaker Online Job Id which is returned as part of job send responses (In ‘brxxxx’ format) or the customer specified Referenceld prefixed with ‘JRI-’ (‘JRI-Referenceld’). if the user is planning to use Referenceld as a way to identify a specific job, The user need to ensure the uniqueness of the Referenceld (Customer provided Identifier) while submitting the fax requests

8.0 GetRealTimeFaxStatusEx

Description

This function can be used to query the real time status (including pages sent if job is in progress) of multiple previously submitted fax jobs using the job ID string. The out parameters contain the real time fax status array (one per Job ID) and error information (if the job submission failed). If the request is sent after the job has been delivered it also returns fax call duration, delivery date/time and remote fax CSID.

```
bool GetRealTimeFaxStatusEx(string UserID, string strPIN, FaxJobId[] FaxJobIds, out  
RealTimeFaxStatusEx[] FaxStatusList, out WSError WSError)
```

	Parameters	Type	Definition
Input	UserID	String	(Required) String representing the GFI FaxMaker Online assigned Username. Example: mbx12065551212
	strPIN	String	(Required) String representing the password
	FaxJobIds	FaxJobId[]	Array of job IDs to request status for. See Appendix A for more details about FaxJobId definition
Output	FaxStatusList	RealTimeFaxStatusEx[]	Return array with results of each requested FaxJobId. See Appendix A for more details about RealTimeFaxStatusEx definition.
	WSError	WSError	Return Error details. See Appendix A for more details about WSError definition
Result	Return	Bool	True/False indicating result of method call

Remarks

- See next page for Soap Request/Response examples
- While requesting status for jobs, the user can either specify the GFI FaxMaker Online Job Id which is returned as part of job send responses (In ‘brxxxx’ format) or the customer specified Referenceld prefixed with ‘JRI-’ (‘JRI-Referenceld’). if the user is planning to use Referenceld as a way to identify a specific job, The user need to ensure the uniqueness of the Referenceld (Customer provided Identifier) while submitting the fax requests.

10.0 SendFax

Description

This function can be used to send multiple files as a fax to multiple recipients. The user can specify additional details about the recipients. The out parameters contain the job IDs (one per recipient), estimated time in seconds till job starts and error information (if the job submission failed).

```
bool SendFax(string UserID, string strPIN, FaxJobRecipient[] Recipients, FaxJobFile[] FaxJobFiles, out  
FaxJobId[] FaxJobIds, out long TTFP, out WSError WSError)
```

	Parameters	Type	Definition
Input	UserID	string	(Required) String representing the GFI FaxMaker Online assigned Username. Example: mbx12065551212
	strPIN	string	(Required) String representing the password
	Recipients	FaxJobRecipient[]	Array of recipient details. See Appendix A for more details about FaxJobRecipient definition
	FaxJobFiles	FaxJobFile[]	Array of file attachments. See Appendix A for more details about FaxJobFile definition
Output	FaxJobIds	FaxJobId[]	Return array of Job IDs. Each recipient submitted will result in a return JobId specific to that recipient. See Appendix A for more details about FaxJobId definition.
	TTFP	Long	Return estimated time in seconds before job will begin
	WSError	WSError	Return Error details. See Appendix A for more details about WSSError definition
Result	Return	bool	True/False indicating result of method call

12.0 SendFaxBroadcast

Description

This function can be used to send multiple files as a fax to multiple recipients. The user can specify additional details about the recipients as well as the fax broadcast job (schedule, cover page, user specified fields, etc.). The out parameters contain the job ID, estimated time in seconds till job starts and error information (if the job submission failed). This function requires a fax broadcast account.

```
bool SendFaxBroadcast(string UserID, string strPIN, FaxJobRecipient[] Recipients, FaxJobFile[]
FaxJobFiles, FaxBroadcastJob JobDetails, out string FaxJobId, out WSError WSError)
```

	Parameters	Type	Definition
Input	<i>UserID</i>	string	<i>(Required) String representing the GFI FaxMaker Online assigned Username. Example: mbx12065551212</i>
	<i>strPIN</i>	string	<i>(Required) String representing the password</i>
	<i>Recipients</i>	FaxJobRecipient[]	<i>Array of recipient details. See Appendix A for more details about FaxJobRecipient definition</i>
	<i>FaxJobFiles</i>	FaxJobFile[]	<i>Array of file attachments. See Appendix A for more details about FaxJobFile definition</i>
	<i>JobDetails</i>	FaxBroadcastJob	<i>Job level information about fax job. See Appendix A for more details about FaxJob definition</i>
Output	<i>FaxJobId</i>	string	<i>Returned Gfifax JobId</i>
	<i>WSError</i>	WSError	<i>Return Error details. See Appendix A for more details about WSError definition</i>
Result	<i>Return</i>	bool	<i>True/False indicating result of method call</i>

13.0 SendFaxBroadcastEx

Description

This function can be used to send multiple files as a fax to multiple recipients. The recipient information is uploaded through a CSV file (format in [Appendix B](#)). The user can specify additional details about the recipients as well as the fax broadcast job (schedule, cover page, user specified fields, etc.). The out parameters contain the job ID, estimated time in seconds till job starts and error information (if the job submission failed). This function requires a fax broadcast account.

bool SendFaxBroadcastEx(string UserID, string strPIN, base64Binary CSVFile, FaxJobFile[] FaxJobFiles, FaxBroadcastJob JobDetails, out string FaxJobId, out WSError WSError)

	Parameters	Type	Definition
Input	<i>UserID</i>	string	<i>(Required) String representing the GFI FaxMaker Online assigned Username. Example: mbx12065551212</i>
	<i>strPIN</i>	string	<i>(Required) String representing the password</i>
	<i>CSVFile</i>	Base64Binary	<i>CSV file containing recipient details base64 encoded. See Appendix B for CSV file content definition.</i>
	<i>FaxJobFiles</i>	FaxJobFile[]	<i>Array of file attachments. See Appendix A for more details about FaxJobFile definition</i>
	<i>JobDetails</i>	FaxBroadcastJob	<i>Job level information about fax job. See Appendix A for more details about FaxJob definition</i>
Output	<i>FaxJobId</i>	string	<i>Returned Gfifax JobId</i>
	<i>WSError</i>	WSError	<i>Return Error details. See Appendix A for more details about WSError definition</i>
Result	<i>Return</i>	bool	<i>True/False indicating result of method call</i>

14.0 SimpleSendFax

Description

This function can be used to send a TIFF file as a fax. It requires minimal information from the user and can be used to send faxes to a single recipient. **Note:** This method only supports TIFF. If you need to send a different document type you will need to use the SendFax or SendFaxEx method.

bool SimpleSendFax(string UserID, string strPIN, string RecipientName, string FaxNumber, base64Binary TIFFJobFile)

	Parameters	Type	Definition
Input	<i>UserID</i>	string	<i>(Required) String representing the GFI FaxMaker Online assigned Username. Example: mbx12065551212</i>
	<i>strPIN</i>	string	<i>(Required) String representing the password</i>
	<i>RecipientName</i>	String	<i>The recipient's name</i>
	<i>FaxNumber</i>	String	<i>The recipients fax number</i>
	<i>TIFFJobFile</i>	Base64Binary	<i>TIF file in Base64 encoded format</i>
Result	<i>Return</i>	string	<i>Return Job ID assigned to this job. EX: br001h501r17j4054185</i>

Remarks

- See next page for Soap Request/Response examples

15.0 SimpleGetFaxStatus

Description

This function can be used to query the current status of a previously submitted fax job using the job ID string. It can be used to query a single job's status at a time.

bool SimpleGetFaxStatus(string UserID, string strPIN, string JobId)

	Parameters	Type	Definition
Input	<i>UserID</i>	string	<i>(Required) String representing the GFI FaxMaker Online assigned Username. Example: mbx12065551212</i>
	<i>strPIN</i>	string	<i>(Required) String representing the password</i>
	<i>JobId</i>	String	<i>JobId requesting status for (br string), can also specify as 'JRI-Referenceld' to request status based on Reference Id. (JRI-REF1234 will lookup jobs with Reference Id 'REF1234')</i>
Result	<i>return</i>	string	<i>The job's current status ID 1: Job Succeeded 2: Job Failed 3: Job is being processed -5019: Invalid Job ID</i>

Appendix A – Object Definitions

FaxJobId

Name	Type	Description
JobId	string	<i>Job id in string form. (in ‘brxxxx’ format)</i>

FaxBroadcastJob

Name	Type	Description
JobScheduleStartType	int	1: <i>Immediate</i> , 2: <i>Scheduled</i> , 3: <i>Off Peak</i>
JobScheduleStartDate	string	<i>Scheduled start date & time for the fax</i>
JobExpiryDate	string	<i>Expiry date & time for the fax</i>
SenderCSID	string	<i>Sender's CSID</i>
SenderName	string	<i>Sender's name</i>
SenderCompany	string	<i>Sender's company</i>
SenderPhone	string	<i>Sender's phone</i>
SenderAddress1	string	<i>Sender's address 1</i>
SenderAddress2	string	<i>Sender's address 2</i>
SenderCity	string	<i>Sender's city</i>
SenderState	string	<i>Sender's state</i>
SenderZip	string	<i>Sender's zip code</i>
SenderCountry	string	<i>Sender's country</i>
CoverName	string	<i>Cover page name</i>
CoverSubject	string	<i>Cover page subject</i>
Resolution	string	<i>"High" or "Low"</i>
ExceptionDestination	string	<i>Recipient address for error report</i>
SenderFax	string	<i>Sender's fax number</i>
SoftwareClient	string	<i>4 digit string which can be used to specify the client software submitting this fax job.</i>
CoverText	string	<i>Cover page text</i>
UserField1	string	<i>User specified field</i>
UserField2	string	<i>User specified field</i>
UserField3	string	<i>User specified field</i>
UserField4	string	<i>User specified field</i>
UserField5	string	<i>User specified field</i>
UserField6	string	<i>User specified field</i>
UserField7	string	<i>User specified field</i>
UserField8	string	<i>User specified field</i>
UserField9	string	<i>User specified field</i>
UserField10	string	<i>User specified field</i>
UserField11		
UserField12		

FaxJob

Name	Type	Description
JobScheduleStartType	int	<i>1: Immediate, 2: Scheduled</i>
JobScheduleStartDate	string	<i>Scheduled start date & time for fax</i>
JobExpiryDate	string	<i>Expiry date & time for the fax</i>
SenderId	string	<i>Sender's CSID</i>
SenderName	string	<i>Sender's name</i>
SenderCompany	string	<i>Sender's company</i>
SenderPhone	string	<i>Sender's phone</i>
CoverText	string	<i>Cover page text</i>
CoverName	string	<i>Cover page name</i>
CoverSubject	string	<i>Cover page subject</i>
ReferenceId	string	<i>User specified job ID</i>
Resolution	string	<i>"High" or "Low"</i>
SenderFax	string	<i>Sender's fax number</i>
SoftwareClient	string	<i>4 digit string which can be used to specify the client software submitting this fax job.</i>
NotifyType	int	<p><i>Indicates the type of final notification required. Following are the possible values.</i></p> <p><i>0 - No Push notification</i> <i>1 - Notify Via Email</i> <i>2 - HTTP Get</i> <i>3 - HTTP Post</i></p>
NotifyDestination	string	<i>Notify destination. For Notify type 1 (email), this field can contain an email address. If no email address is specified, the contact email address of the account will be used. For Notify Type 2 and 3, this field may contain the destination hostname and port or a fully specified URL. If only a host name or IP address is specified, HTTP GET Template defined for this account will be used (Replacing Destination with the specified value) .</i>
NotifyIncludeDeliveredImage	int	<p><i>Indicates if the email notification should also include the delivered image. This field can have the following values.</i></p> <p><i>0 - Do not include delivered image</i> <i>1 - Include delivered image on successful delivery only.</i> <i>2 - Include delivered image on failed delivery only.</i> <i>3 - Include delivered image on successful and</i></p>

		<i>failed delivery</i>
NotifyAuthUser	string	<i>Basic Authenticate user id for HTTP Post and Get (Optional)</i>
NotifyAuthPassword	string	<i>Basic Authenticate password for HTTP post & Get (Optional)</i>
UserField1	string	<i>(Same as ReferenceId) If you assign ReferenceId then do not use this field.</i>
UserField2	string	<i>User specified field</i>
UserField3	string	<i>User specified field</i>
UserField4	string	<i>User specified field</i>
UserField5	string	<i>User specified field</i>
UserField6	string	<i>User specified field</i>
UserField7	string	<i>User specified field</i>
UserField8	string	<i>User specified field</i>
UserField9	string	<i>User specified field</i>
UserField10	string	<i>User specified field</i>
UserField11	string	<i>User specified field</i>
UserField12	string	<i>User specified field</i>

FaxJobFile

Name	Type	Description
FileIndex	int	<i>Represents position that document will placed in reference to other documents included.</i>
FileTypeid	int	<i>Indicates the document type. See appendix D-3 for a list of values</i>
FileData	Base64Binary	<i>Binary contents of file</i>

FaxJobId

Name	Type	Description
JobId	String	<i>GFI FaxMaker Online fax JobId associated with Job</i>

FaxJobRecipient

Name	Type	Description
JobId	String	GFI FaxMaker Online fax JobId associated with Job
Name	Type	Description
RecipFaxNumber	string	Recipient's fax number
RecipCompany	string	Recipient's company
RecipTitle	string	Recipient's title
RecipName	string	Recipient's name
RecipSecureCSID	string	Recipient's secure CSID
RecipFirstName	string	Recipient's first name
RecipLastName	string	Recipient's last name
RecipAddress1	string	Recipient's address 1
RecipAddress2	string	Recipient's address 2
RecipCity	string	Recipient's city
RecipState	string	Recipient's state
RecipZipcode	string	Recipient's zip code
RecipCountry	string	Recipient's country
RecipVoiceNumber	string	Recipient's voice number
RecipField1	string	Recipient specified field
RecipField2	string	Recipient specified field
RecipField3	string	Recipient specified field
RecipField4	string	Recipient specified field
RecipField5	string	Recipient specified field
RecipField6	string	Recipient specified field
RecipField7	string	Recipient specified field
RecipField8	string	Recipient specified field
RecipField9	string	Recipient specified field
RecipField10	string	Recipient specified field
RecipField11	string	Recipient specified field
RecipField12	string	Recipient specified field

FaxStatus

Name	Type	Description
FaxJobId	string	GFI FaxMaker Online fax JobId associated with Job
FaxJobStatusId	int	Job's status ID
StatusDescription	string	Job's status description
Error	WSError	Job's error information

RealTimeFaxStatus

Name	Type	Description
FaxJobId	string	GFI FaxMaker Online fax JobId associated with Job
FaxJobStatusId	int	Job's status ID. See appendix D-1 for list of status codes
StatusDescription	string	Job's status description
RecipientState	int	Recipient's current state. See appendix D-2 for list of status codes
RecipientCurrentPageCount	int	Current pages sent
RecipientTotalPageCount	int	Total page count in job
Error	WSError	Job's error information

RealTimeFaxStatusEx

Name	Type	Description
FaxJobId	string	Job ID whose status is requested
FaxJobStatusId	int	Job's status ID. See appendix D-1 for list of status codes
StatusDescription	string	Job's status description
RecipientState	int	Recipient's current state. See appendix D-2 for list of status codes
RecipientCurrentPageCount	int	Current pages sent
RecipientTotalPageCount	int	Total page count in job
Error	WSError	Job's error information
FaxDeliveryDateTime	string	Fax delivery date & time
FaxDeliveryDuration	int	Fax delivery duration
RemoteFaxCSID	string	Recipient Fax CSID

RealTimeFaxStatusEx2

Name	Type	Description
FaxJobId	String	<i>Job ID whose status is requested</i>
FaxJobStatusId	Int	<i>Job's status ID. See appendix D-1 for list of status codes</i>
StatusDescription	String	<i>Job's status description</i>
RecipientState	Int	<i>Recipient's current state. See appendix D-2 for list of status codes</i>
RecipientCurrentPageCount	Int	<i>Current pages sent</i>
RecipientTotalPageCount	Int	<i>Total page count in job</i>
Error	WSError	<i>Job's error information</i>
FaxDeliveryDateTime	String	<i>Fax delivery date & time</i>
FaxDeliveryDuration	Int	<i>Fax delivery duration</i>
RemoteFaxCSID	String	<i>Recipient Fax CSID</i>
Referenceld	String	<i>User specified Reference Id</i>

FaxBroadcastStatusRequest

Name	Type	Description
JobId	String	<i>Job ID whose status is requested</i>
StartRecipientId	Int	<i>Start recipient id. -1 to return all the recipients.</i>
EndRecipientId	Int	<i>End recipient id. -1 to return all the recipients.</i>
RecipientStatus	Int	<i>Set to indicate the recipients to return based on the status.Possible values are -1 : all 0: In Submission 1: Successfull 2: Failed 3: In progress 4:Failed in Retry 5: Pending Cancelation</i>

RecipientStatus

Name	Type	Description
FaxJobId	String	<i>Job ID whose status is requested</i>
RecipientStatusId	Int	<i>Recipient's status ID. See appendix D-1 for list of status codes</i>
RecipientStatusDescription	String	<i>Recipient's status description</i>
RecipientName	String	<i>Recipient name</i>
RecipientCompanyName	String	<i>Recipient company name</i>
DeliveryAttempts	Int	<i>Number of delivery attempts</i>

DeliveryDuration	Int	<i>Duration in seconds</i>
DeliverySpeed	Int	<i>Delivery speed</i>
ReceiveCSID	String	<i>Remote CSID</i>
PageCount	Int	<i>Number of pages</i>
FaxNumber	String	<i>Fax number</i>
StartDate	String	<i>Start datetime</i>
EndDate	String	<i>End datetime</i>

WSError

Name	Type	Description
ErrorCode	Int	<i>Error code</i>
ErrorString	String	<i>Error string</i>

Appendix B

CSV File Format

Column Header	Description
EventFaxNumber	<i>Recipient fax number</i>
EventRecipientName	<i>Recipient name</i>
EventRecipientCompanyName	<i>Recipient company</i>
RecipTitle	<i>Recipient Title</i>
RecipFirstName	<i>Recipient first name</i>
RecipLastName	<i>Recipient last name</i>
RecipAddress1	<i>Recipient's address 1</i>
RecipAddress2	<i>Recipient's address 2</i>
RecipCity	<i>Recipient's city</i>
RecipState	<i>Recipient's state</i>
RecipZip	<i>Recipient's zip code</i>
RecipCountry	<i>Recipient's country</i>
RecipVoice	<i>Recipient's voice number</i>
RecipField1	<i>User specified field</i>
RecipField2	<i>User specified field</i>
RecipField3	<i>User specified field</i>
RecipField4	<i>User specified field</i>
RecipField5	<i>User specified field</i>
RecipField6	<i>User specified field</i>
RecipField7	<i>User specified field</i>
RecipField8	<i>User specified field</i>
RecipField9	<i>User specified field</i>
RecipField10	<i>User specified field</i>
RecipField11	<i>User specified field</i>
RecipField12	<i>User specified field</i>

Appendix C

Global Cover Page List - Fax Broadcast

Column Header	Description
FB1MV0-Recipient header line	Recipient header line.tif
FB1MV0-Recipient on bottom 1/2	Recipient on bottom half.tif
FB1MV0-Test Fax Cover Page	Test Fax Cover Page.tif
FB1NV0-Fax Cover Sheet1	Fax Cover Sheet1.tif
FB1NV0-Fax Cover Sheet2	Fax Cover Sheet2.tif
FB1NV0-Normal Fax Cover Page	Normal Fax Cover Page.tif
FB1NV0-Recipient header line	Recipient header line.tif
FB1NV0-CoverText Page	CoverText Page.tif

Global Cover Page List -InternetFax

Column Header	Description
IF1NV0-Normal Fax Cover Page	Normal Fax Cover Page.tif
IF1NV0-Recipient header lin	Recipient header line.tif
IF1MV0-Normal Fax Cover Page	Normal Fax Cover Page.tif
IF1MV0-Recipient header line	Recipient header line.tif

Appendix D - Codes

Fax Status Codes

Id	Description
1	Success
2	Failure
3	In Progress

Recipient Status Codes

Id	Description
0	Unknown
1	Pending
2	Completed
3	Aborted
4	Failed
10	Dialing
11	Sending
12	Submitted

File Types

Id	Description
1	TIFF (G3)
2	TIFF (G4)
4	TIFF Merge Cover
100	Word Document
101	PDF Document
102	RTF Document
103	Excel Document
104	PowerPoint Document
105	Text File
106	Visio
107	GIF
108	JPEG
109	Color TIFF
111	HTML
112	MHTML

Error Codes

Fax Delivery Codes - Fax Calls

Id	Description
1500	Data Modem
1500	Dialing failure
1500	Fast Busy
1500	Fast Busy (no answer from user)
1500	Fast Busy (Q850 Incompatible Destination)
1500	Fast Busy (Q850 Network out of order)
1500	Fast Busy (Q850 No circuit/channel available)
1500	Fast Busy (Q850 Normal unspecified)
1500	Fast Busy (Q850 Resources unavailable, unspecified)
1500	Fast Busy (Q850 Switching equipment congestion)
1500	Fast Busy (SIP Invite sent 7 times with no response)
1500	Fast Busy (SIPServer Service Unavailable)
1500	Fast Busy (switching equipment congestion)
1500	Fast Busy (Timeout waiting for invite final response)
1500	No Answer
1500	No Answer (call rejected)
1500	No Answer (destination out of order)
1500	No Answer (no route to destination)
1500	No Answer (normal call clearing)
1500	No Answer (Normal call clearing)
1500	No Answer (recovery on time expiry)
1500	No Answer (unallocated or unassigned number)
1501	Busy
1501	Busy (no answer from user)
1501	Busy (switching equipment congestion)
1502	No Ringback
1503	Voice Answer Detected
1503	Voice Answer Detected (B channel lost)
1503	Voice Answer Detected (call rejected)
1503	Voice Answer Detected (destination out of order)
1503	Voice Answer Detected (no route to destination)
1503	Voice Answer Detected (normal call clearing)
1503	Voice Answer Detected (switching equipment congestion)
1503	Voice Answer Detected (unallocated or unassigned number)
1504	Not a Fax Machine
1508	Not a fax machine (B channel lost)
1508	Not a fax machine (call rejected)
1508	Not a fax machine (destination out of order)
1508	Not a fax machine (No Answer, really no fax answer)
1508	Not a fax machine (no route to destination)

1508	Not a fax machine (normal call clearing)
1508	Not a fax machine (Normal call clearing)
1508	Not a fax machine (Timeout waiting for reinvite to fax)
1508	Not a fax machine (unallocated or unassigned number)
1509	Fax failed
1509	Fax negotiation failed
1509	Fax negotiation failed (Incompatible fax device)
1509	Fax negotiation failed (no connection)
1509	Fax negotiation failed (normal call clearing)
1509	Fax negotiation failed (Normal call clearing)
1509	Fax negotiation failed (training error)
1509	Fax negotiation failed (Unsustainable connection - bitrate)
1509	Fax negotiation failed (Unsustainable connection - tsi dcs training)
1509	Fax negotiation failed (Unsustainable connection - unexpected disconnect)
1509	Fax transmission failed
1509	Fax transmission failed (local abort)
1509	Fax transmission failed (Normal call clearing)
1509	Fax transmission failed (parameter error)
1509	Fax transmission failed (protocol error)
1509	Fax transmission failed (remote abort)
1509	Fax transmission failed (SIP bye received before fax was completed)
1509	Fax transmission failed (Unsustainable connection - invalid end of ecm block)
1509	Fax transmission failed (Unsustainable connection - invalid end of page response)
1509	Fax transmission failed (Unsustainable connection - invalid response after ctc)
1509	Fax transmission failed (Unsustainable connection - no response after ctc)
1509	Fax transmission failed (Unsustainable connection - no response after end of page)
1509	Fax transmission failed (Unsustainable connection - no response after rr)
1509	Fax transmission failed (Unsustainable connection - rnr timeout)
1509	Fax transmission failed (Unsustainable connection - training response)
1509	Fax transmission failed (Unsustainable connection - tsi dcs training)
1509	Fax transmission failed (Unsustainable connection - unexpected disconnect)
1509	Minimum Fax Speed limit passed
1509	Minimum Fax Speed limit passed (protocol error)
1509	Minimum Fax Speed limit passed (remote abort)
1509	Minimum Fax Speed limit passed (Unsustainable connection - bitrate)
1509	Minimum Fax Speed limit passed (Unsustainable connection - ecm baud step down exceeded)
1509	Poor Connection
1509	Retransmission limit exceeded
1509	Unable to Transmit
1510	Remote Hangup
1511	Remote Disconnect
1513	No PPM Response
1515	Sittone Detected
1515	Sittone Detected (Q850 Call rejected)

1515	Sittone Detected (Q850 No route to destination)
1515	Sittone Detected (Q850 No route to specified transit network)
1515	Sittone Detected (Q850 Number changed)
1515	Sittone Detected (Q850 Send special information tone)
1515	Sittone Detected (Q850 Unallocated number)
1516	Voice seen before connection
1516	Voice seen before connection (no answer from user)
1516	Voice seen before connection (switching equipment congestion)

Fax Delivery Codes - Block List

Id	Description
1517	Blocked Number
1518	Master Blocked Number
1519	Voice Blocked Number
1520	Sittone Blocked Number
1521	Expensive Blocked Number
1522	Secure CSID check failed
1523	Duplicate Blocked Number
1524	Unassigned Blocked Number

Fax Delivery Codes - Other Errors

Id	Description
1601	C3Tiff ContactTiff crashed
1601	Cadence Break
1601	DB Error
1601	Eicon internal/hardware/software general failure
1601	Eicon software/hardware failure
1601	FaxBack internal/hardware/software general failure
1601	FaxBack software/hardware failure
1601	General Error
1601	Header Render Error
1601	Internal Eicon interface failure
1601	Internal Eicon interface failure (timeout submitting)
1601	Internal FaxBack interface failure
1601	Internal FaxBack interface failure (timeout submitting)
1601	Invalid TIF file at delivery time
1601	NO CDR FOUND
1601	Render Farm error
1601	Render Farm error
1601	Render Farm error
1601	Render Farm error no file
1601	Render Farm error no file

1601	Render Farm error no file
1601	Stop pending - reset ownership
1601	Tiff Merge Error
1601	TIMEDOUT
1602	Comm Error
1602	Dialing Error
1602	No channel
1602	No remote channel
1602	Request Timed Out
1602	T1 Down
1602	Transmit error
1607	No DialTone
1609	Max Retries Made
1610	Job Cancelled

Appendix E

Date/Time format

Acceptable Date/Time format - YYYY-MM-DDTHH:MM:SS±TZH:TZM

YYYY - The year in four digits.

MM - The month number in two digits (01 - January and 12 - December).

DD - The date in two digits (01 - 31).

T - Literal separator between date and time.

HH - The hour in two digits, it must be in 24 hour format (00 - 23).

MM - The minute in two digits (00 - 59).

SS - The seconds in two digits (00 - 59).

± - '+' or '-' sign depending on time zone offset from UTC (ET is -05:00).

TZH - Time zone offset hour part in two digits.

TZM - Time zone offset minute part in two digits.

All the parameters requiring date and time information need to be passed in the format given above (JobScheduleStartDate, JobExpiryDate). All date and time fields will be returned by the web service in a string formatted in the above format (e.g. FaxDeliveryDateTime).

Example - November 30 2007, 6:03:15 AM in Pacific Time (PT) would be:

2007-11-30T06:03:15-08:00.

While specifying the **scheduled start date and time**, the following rules apply.

- If you specify a scheduled date and time which is in the past, the system will reset it to immediate (Current date and time)
- If you specify a scheduled date and time which is more than 4 days, the system will reject the job with an error "ERROR: Scheduled DateTime specified exceeds maximum allowed defer time." (error code -5040)

While specifying the **expiry date and time**, the following rules apply.

- If you specify an expiry date and time which is in the past, the system will reset it to default which is 2 days.
- If you specify an expiry date and time which is less than the scheduled date and time, the system will reset it to default which is 2 days more than scheduled start date and time.
- If you specify an expiry date and time which is more than 2 days, the system will reset it to 2 days.

Appendix F – Http Notifications

Http Notifications

Design Guidelines

When choosing to receive final status notifications via PUSH technologies such as HTTP Post, HTTP Get or Web Services it is important to also implement a backup strategy to PULL for final status. PUSH notifications can take up to several minutes after the fax has been delivered before they are PUSHED to your server. Also if the server we push to becomes unavailable the notification will be delayed. If your application depends on timely notifications then implementing PULL is recommended over PUSH as it offers real-time status of the fax being sent. If you are using PUSH notifications then it is recommended you implement a PULL in the event you have not received final status after the expected deliver date/time.

Example: 1 page fax sent to be delivered immediately. Application has not received final notification after 5 minutes. Application starts pulling for final status every 1 minute until receives final status information.

Tokens available for the URL and Body sections of the HTTP notification transactions

Token Name	Description	URL Headers	Body
FaxNumber	Fax number as specified by the user Usually devoid of all non numeric fields	Yes	Yes
Country	Name of the destination country/location	Yes	Yes
TAB	Expands to '4' space characters or nothing	No	No
CRLF	Expands to a end of line sequence	No	No
Status	Either 'Success' or 'Failure'	Yes	Yes
MessageId	Either prefix-job or prefix-job-recipient format	Use FullMessageId	Use FullMessageId
ErrorString		Yes	Yes
ErrorCode		Yes	Yes
ErrorClass		Yes	Yes
ErrorExtra		Yes	Yes
Reference Id	The user specified job reference id	Yes	Yes
ReferenceId	Same as above	Yes	Yes
Original Subject	The original subject submitted in the email including tokens that may have been stripped out	No	No
Subject	Subject to appear on the cover page	Yes	Yes
PreProcError	no value specified	n/a	n/a
Original Time	Original email submission time, or the insertion time of the job into the system	No	No
TimeSent	Date/time of the delivery	Yes	Yes
NumPages		Yes	Yes
CallDuration		Yes	Yes
TestId	Used internally	No	No
StatusId	Either 1 for success, or 2 for failure	Yes	Yes

FaxSpeed	Speed of the fax delivery	Yes	Yes
FullMessageId	as in format 'br....' with checksums on numbers	Yes	Yes
ErrorResult	Our very small number of errors - error code	Yes	Yes
AccountId	Submission account identifier	Yes	Yes
RemoteCSID	CSID of the remote fax machine (usually it's phone number)	Yes	Yes
Destination	Replaced with contents of user specified notify destination. So the user can specify either a production and staging/beta host name (and :port if needed) OR the user can specify the full URL starting with http and we'll replace the template URL	Yes	No
DeliveredImage	Base64 encoded file contents or "" (empty)	No	Yes
RecptName	Recipient name	Yes	Yes
Company	Company name	Yes	Yes

HttpGet

This notification type is very simple. All the tokens are encoded into the URL template, and the body template should be empty. The Http content type is also not relevant for this type of transaction.

HttpBodyContentType setting

Not applicable

HttpUrlTemplate setting

`http://%{Destination}/GifaxDeliveryNotification.Asp?AccountId=%{AccountId}&ReferenceId=%{ReferenceId}&FaxJobId=%{FullMessageId}&FaxJobStatusId=%{StatusId}&StatusDescription=%{Status}&PageCount=%{NumPages}&FaxDeliveryDateTime=%{TimeSent}&FaxDeliveryDuration=%{CallDuration}&RemoteFaxCSID=%{RemoteCSID}&ErrorCode=%{ErrorResult}&ErrorString=%{ErrorString}`

OR

`https://%{Destination}/abc.xyz?AccountId=%{AccountId}&ReferenceId=%{ReferenceId}&FaxJobId=%{FullMessageId}&FaxJobStatusId=%{StatusId}&StatusDescription=%{Status}&PageCount=%{NumPages}&FaxDeliveryDateTime=%{TimeSent}&FaxDeliveryDuration=%{CallDuration}&RemoteFaxCSID=%{RemoteCSID}&ErrorCode=%{ErrorResult}&ErrorString=%{ErrorString}`

The %{Destination} token is replaced from the contents of the NotifyDestination field for the job, if the NotifyDestination does not start with ‘http’ or ‘https’.

If the %{Destination} field starts with ‘http’ or ‘https’ then it completely replaces this Template setting with a job specified notification.

For security reasons you may want to use the Https protocol.

HttpBodyTemplate setting

Not applicable

Http Post - form data

This notification type has two flavors. Application/x-www-form-urlencoded is the simplest form and is encoded similar to the part of the HTTP GET URL after the ? mark. The code will automatically flip to the more complex multipart-form-data notification format, if an image is being included in the notification.

HttpBodyContentType setting

application/x-www-form-urlencoded

The code may on the fly change the type too multipart/form-data if it has to include an image as requested by the job flags.

HttpUrlTemplate setting

http://%{Destination}/GifaxDeliveryNotification.Asp

OR

https:%{Destination}/abc.xyz

The %{Destination} token is replaced from the contents of the NotifyDestination field for the job, if the NotifyDestination does not start with ‘http’ or ‘https’.

If the %{Destination} field starts with ‘http’ or ‘https’ then it completely replaces this Template setting with a job specified notification.

For security reasons you may want to use the Https protocol.

HttpBodyTemplate setting

AccountId=%{AccountId}&ReferenceId=%{ReferenceId}&FaxJobId=%{FullMessageId}&FaxJobStatusId=%{StatusId}&StatusDescription=%{Status}&PageCount=%{NumPages}&FaxDeliveryDateTime=%{TimeSent}&FaxDeliveryDuration=%{CallDuration}&RemoteFaxCSID=%{RemoteCSID}&ErrorCode=%{ErrorResult}&ErrorMessage=%{ErrorString}

Http Post - application/octet-stream

This notification type allows complete flexibility in what you want us to send you. As long as it is TEXT data and we can insert our tokens, the format is completely free form.

HttpBodyContentType setting

Application/octet-stream Or User specified content-type field setting

HttpUrlTemplate setting

http:{Destination}/GifaxDeliveryNotification.Asp

OR

https:{Destination}/abc.xyz

The %{Destination} token is replaced from the contents of the NotifyDestination field for the job, if the NotifyDestination does not start with ‘http’ or ‘https’.

If the %{Destination} field starts with ‘http’ or ‘https’ then it completely replaces this Template setting with a job specified notification.

For security reasons you may want to use the Https protocol.

HttpBodyTemplate setting

Here is your notification%{CRLF}%{CRLF}StatusId=%{StatusId}&...

Http Post - xml

This transaction type would allow you to specify your own XML data, not following a SOAP convention, but instead a simpler protocol of your own choosing. We do not specify at all what may be contained in your XML but it can be anything from the specified token list.

HttpBodyContentType setting

text/xml

HttpUrlTemplate setting

http://%{Destination}/GifaxDeliveryNotification.Asp

OR

https:%{Destination}/abc.xyz

The %{Destination} token is replaced from the contents of the NotifyDestination field for the job, if the NotifyDestination does not start with ‘http’ or ‘https’.

If the %{Destination} field starts with ‘http’ or ‘https’ then it completely replaces this Template setting with a job specified notification.

For security reasons you may want to use the Https protocol.

HttpBodyTemplate setting

```
<?xml version="1.0" encoding="utf8"?>
<FaxInformation>
  <FaxNumber>%{FaxNumber}</FaxNumber>
  <Country>%{Country}</Country>
  <FullMessageId>%{FullMessageId}</FullMessageId>
  <Status>%{Status}</Status>
  <StatusId>%{StatusId}</StatusId>
  <ErrorString>%{ErrorString}</ErrorString>
  <ErrorCode>%{ErrorCode}</ErrorCode>
  <ErrorClass>%{ErrorClass}</ErrorClass>
  <ErrorExtra>%{ErrorExtra}</ErrorExtra>
  <ReferenceId>%{ReferenceId}</ReferenceId>
  <OriginalSubject>%{OriginalSubject}</OriginalSubject>
  <Subject>%{Subject}</Subject>
  <OriginalTime>%{OriginalTime}</OriginalTime>
  <TimeSent>%{TimeSent}</TimeSent>
  <NumPages>%{NumPages}</NumPages>
  <CallDuration>%{CallDuration}</CallDuration>
  <FaxSpeed>%{FaxSpeed}</FaxSpeed>
  <ErrorResult>%{ErrorResult}</ErrorResult>
  <AccountId>%{AccountId}</AccountId>
  <RemoteCSID>%{RemoteCSID}</RemoteCSID>
  <DeliveredImage>%{DeliveredImage}</DeliveredImage>
  <RecptName>%{RecptName}</RecptName>
  <Company>%{Company}</Company>
</FaxInformation>
```

Http Post - C3FDNS Soap

This SOAP service is defined/supported to allow notifications to get all the data/status information that would normally be queryable from the system after the job completed. But instead it is pushed to you as soon as the job completes, without unnecessary polling of the system.

The WSDL file to implement is located in [Appendix G](#)

HttpBodyContentType setting

text/xml

HttpUrlTemplate setting

http://%{Destination}/GifaxDeliveryNotificationService.Asmx
HTTP_SOAPAction=C3FDNS/FaxDeliveryNotification

OR

https:%{Destination}/abc.xyz

The %{Destination} token is replaced from the contents of the NotifyDestination field for the job, if the NotifyDestination does not start with ‘http’ or ‘https’.

If the %{Destination} field starts with ‘http’ or ‘https’ then it completely replaces this Template setting with a job specified notification.

For security reasons you may want to use the Https option.

And the second line allows specification of HTTP headers that are required for the transaction.
HTTPAnything=value is the specified format.

HttpBodyTemplate setting

```
<?xml version="1.0" encoding="utf-8"?>
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/
    xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
    xmlns:xsd="http://www.w3.org/2001/XMLSchema">
    <soap:Body>
        <FaxDeliveryNotification xmlns="C3FDNS">
            <AccountId>%{AccountId}</AccountId>
            <Referenceld>%{Referenceld}</Referenceld>
            <FaxJobId>%{FullMessageId}</FaxJobId>
            <FaxJobStatusId>%{StatusId}</FaxJobStatusId>
            <StatusDescription>%{Status}</StatusDescription>
            <PageCount>%{NumPages}</PageCount>
            <FaxDeliveryDateTime>%{TimeSent}</FaxDeliveryDateTime>
            <FaxDeliveryDuration>%{CallDuration}</FaxDeliveryDuration>
            <RemoteFaxCSID>%{RemoteCSID}</RemoteFaxCSID>
            <ErrorCode>%{ErrorResult}</ErrorCode>
            <ErrorString>%{ErrorString}</ErrorString>
            <DeliveredImage>%{DeliveredImage}</DeliveredImage>
        </FaxDeliveryNotification>
    </soap:Body>
</soap:Envelope>
```

Appendix G

HTTP C3FDNS SOAP Notification WSDL definition

This WSDL file for the C3FDNS (Fax Delivery Notification Service) is compatible with our standard notification SOAP template. You as the ‘server’ in this case, have to implement a SOAP Web Service that follows this specification so that our notifications will be accepted/handled by your service.

```
<?xml version="1.0" encoding="utf-8"?>
<wsdl:definitions xmlns:soap="http://schemas.xmlsoap.org/wsdl/soap/"
    xmlns:tm="http://microsoft.com/wsdl/mime/textMatching/"
